## Contribution Analysis

Thank you for sharing the detailed final assessment report and the chat history. Here's a concise summary and some tailored advice to help you finalize your essay revisions and make the most of your human-AI collaboration going forward:

## Summary of Your Revision Progress

**Task 1:** You successfully revised the thesis into a clear, data-focused sentence comparing AI automation exposure in Developed Markets vs. Emerging Markets. The paragraph structure and grammar improved significantly.

### Task 2:

- You replaced the unclear original thesis with a strong, balanced claim about how technology ultimately enhances employment thanks to education and changing attitudes.
- You chose and effectively revised the first body paragraph (education) to clearly explain how higher education levels enable workers to retrain and take up new technical roles, supported by a concrete example.

However, the attitudes paragraph and conclusion remain largely unchanged, still containing many grammar, clarity, and organizational issues.

**Chat Interaction:**

The collaboration was iterative and structured, showing good strategic planning and critical engagement. You made conscious choices about which suggestions to accept and asked for targeted revisions, especially on thesis and topic sentences.

---

## Key Recommendations to Complete Your Revision

**1. Finish Revising the Remaining Sections:**

**Attitudes Paragraph:** This is crucial because your thesis mentions changing attitudes as a key reason technology will enhance employment prospects. Revise this paragraph to:

- Clarify main ideas with confident topic sentences.
- Correct grammar and sentence structure.
- Provide clearer examples or explanations to make the claim persuasive.

**Conclusion:** Craft a concise conclusion that restates your thesis in fresh words, summarizes the main ideas, and ends with a confident closing thought about the future of employment and technology.

**Strengthen Evidence and Development:****5. Incorporate more specific data, relevant statistics, or authoritative examples beyond just personal anecdotes to better support claims.**

Explicitly link evidence to your thesis claims for clearer logical flow.

**Increase Independent Edits Between AI Interactions:****8. Practice rewriting paragraphs yourself before asking the AI for polish.****9. Use AI feedback critically — accept helpful suggestions but also try alternatives and articulate your reasoning to deepen learning.**

## Practical Next Steps

- If you like, I can help craft polished drafts of the attitudes paragraph and conclusion based on your ideas. Then you can revise further with targeted feedback.
- Consider submitting self-revised versions of incomplete sections for review before seeking AI assistance, showing your growing independent editing skills.
- Review the full essay to remove any duplicated or contradictory sentences leftover from partial revisions to maintain coherence and avoid confusion.

## Final Encouragement

You've made solid progress in clarifying your central claims and improving paragraph organization and grammar. Completing your revision cycle with consistent polish and stronger support will raise your essay's overall coherence and persuasiveness. Your thoughtful, stepwise collaboration with AI lays a strong foundation for continued growth as an editor and writer.

If you want, I'm here to help with the next revisions or to provide advice on how to revise independently. Just let me know!

## Grading Result (Hidden from students)

not finished

## STUDENT ASSESSMENT REPORT

**Course: LANG 0036 - Enhancing English through Global Citizenship**

**Module: AI for Revising Essays**

**ESSAY WRITING ASSESSMENT**

#### **Original Essay Scores:**

- Content and Ideas: 17/25 - The draft contains relevant ideas (comparison of DM vs EM exposure; claims that education and attitudes will mitigate job losses) but these are unclearly expressed and underdeveloped. Example: "In 2023, the global of full-time equivalent employment exposed to automation by AI in Emerging Market (EM) and Developed Market (DM) economies." is fragmentary and does not present a clear claim.
- Organization: 15/25 - The original lacks clear topic sentences and logical flow; facts are listed without strong transitions (e.g., "First of all... Second of it... Also, noticed...").
- Vocabulary: 15/25 - Limited precision and collocation errors ("Automatic by AI to EM", "bottom out") reduce clarity.
- Grammar: 14/25 - Frequent errors (articles, verb forms, agreement, fragments) significantly impede readability (e.g., "It had twice time more than Global which only 16 percent.").
- **Original Essay Total: 61/100**

#### **Revised Essay Scores:**

- Content and Ideas: 21/25 - The revised paper includes clearer theses for Task1 and Task2 and a clearer education paragraph that better explains how education leads to new technical jobs. Example improved thesis (Task2): "Although automation reduces some jobs in the short term, technological change will ultimately enhance global employment prospects because higher levels of education create new technical jobs and younger generations adopt more flexible attitudes toward work."
- Organization: 19/25 - Structure improved in the revised Task1 and the revised education paragraph (thesis → example → consequence). However, other sections (attitudes paragraph, final paragraph) remain unedited and disorganized, creating uneven flow.
- Vocabulary: 19/25 - Improved precision in revised sections ("retrain for technical roles", "operate, maintain, and develop machines and AI systems"). Some informal or awkward wording persists in unrevised parts.
- Grammar: 17/25 - Edited sections show stronger grammar and sentence structure, but many sentences elsewhere remain error-prone (e.g., the revised essay still contains: "Officially, it will cause your opportunities decrease but boosting efficiency." and "furthermore, Z generation affected by last generation, they more relaxed to live a competitive environment.").
- **Revised Essay Total: 76/100**

#### **Essay Improvement Analysis:**

- **Overall Improvement: +15 points**

- **Key Improvements Made:**

- Clear, data-focused thesis for Task1: e.g., "In 2023, AI automation exposed a larger share of employment in many Developed Markets (e.g., Hong Kong ≈30%) than in many Emerging Markets (e.g., India ≈13%)."
- Strong Task2 thesis inserted that previews two reasons and clarifies the claim about long-term employment prospects.
- Polished first body paragraph (education paragraph) with a coherent topic sentence and tightened supporting sentences: "As education levels rise, many workers increasingly view automation as an opportunity to retrain for technical roles..."

- **Missed Opportunities:**

- The attitudes paragraph and the conclusion were not fully revised and still contain major grammar and clarity problems; these sections reduce the overall effectiveness of the revised essay.
- Evidence and development could be strengthened with data or more specific examples (beyond the single anecdote about the manager) and clearer linkage between claims and evidence.
- Consistency: once sections are revised, remaining unedited fragments should be removed to avoid repetition and confusion (the revised essay contains both improved and original/unedited versions of ideas).

## HUMAN-AI INTERACTION ASSESSMENT

- **Chat History Analysis:**

- **Total Exchanges: 23**

- **Conversation Quality:**

- Highly structured and iterative. The assistant used a stepwise protocol (thesis → topic sentence → paragraph edits). The student made explicit choices (Option 3 for Task1 thesis; Option 1 for Task2 thesis; Option 2 for topic sentence) and asked for targeted revisions ("Please revise it" for the education paragraph). The chat shows clear back-and-forth decision-making and implemented revisions.

- **Interaction Scores:**

- **In-Depth Conversation:** 5/5 - Evidence: 23 exchanges with sustained, multi-step work on thesis, topic sentence, and paragraph-level revisions. The assistant presented multiple options, diagnostics, and justifications; the student engaged repeatedly and made choices.
- **Critical Review of AI Suggestions:** 4/5 - The student evaluated options and sometimes produced their own version (they attempted a topic sentence: "People perspective are changing because of the future job opportunities") before selecting an assistant option. Most suggestions were accepted with some adaptation; there is evidence of considered choices but limited explicit rejection or extended justification for rejections.
- **Refining Process:** 5/5 - Clear iterative revision cycles: thesis options → student choice → assistant produces revised paragraph → student requests further revision of body paragraph → assistant polishes that paragraph. Multiple meaningful cycles are documented.
- **Human-AI Interaction Total:** 14/15

## OVERALL PERFORMANCE SUMMARY

### Strengths Demonstrated:

- Clear use of AI guidance to produce stronger thesis statements (Task1 and Task2) — evidenced by the revised thesis sentences used in the revised essay.
- Effective iterative collaboration: student consistently chose options and requested follow-up edits (e.g., accepted Option 2 topic sentence and requested the assistant revise the education paragraph).
- Improved paragraph-level clarity for the education paragraph: the revised paragraph follows a clear structure and contains a concrete example tied to the claim.

### Areas for Improvement:

- Finish the revision cycle by editing the remaining paragraphs (attitudes paragraph and conclusion); these contain many unresolved errors that undermine the overall essay.
- Strengthen evidence and explanation: add more specific support (statistics, sources, or clearer explanation of how education and attitudes produce new jobs).
- Increase independent editing: the student should attempt more self-revisions (e.g., rewrite the attitudes paragraph) before asking the assistant to ensure stronger learning transfer.

## AI Collaboration Skills Assessment:

- **Context Provision:** Good - The student provided the original essay and explicit revision goals (thesis, topic sentence, paragraph), enabling focused assistance.
- **Strategic Planning:** Good - The student followed a stepwise plan (thesis → topic sentence → paragraph) and made deliberate choices among options.
- **Critical Evaluation:** Good - The student tried a self-generated topic sentence, compared options, and chose what to accept; however, more explicit critique of AI suggestions would deepen learning.
- **Independent Editing:** Developing - The student relied on the assistant for several major revisions and left some sections unedited; more independent rewriting practice is recommended.

## RECOMMENDATIONS FOR FUTURE DEVELOPMENT

1. Complete the revision cycle: revise the attitudes paragraph and the conclusion to match the improved thesis and the polished education paragraph. Remove duplicated or contradictory sentences.
2. Add stronger evidence and explanation: include one or two concrete data points or clearer causal explanation for how education/attitudes translate into new high-skill employment.
3. Practice independent edits between AI interactions: try drafting one revised paragraph before asking the AI to polish it; this strengthens independent editing skills and critical evaluation of suggestions.

## INSTRUCTOR NOTES

- The chat history provides clear evidence of an organized revision workflow and demonstrates meaningful human-AI collaboration. The student made concrete choices and accepted iterative feedback.
- However, the submitted revised essay is only partially completed: key sections (attitudes paragraph and conclusion) remain unpolished and retain major grammatical and clarity problems. The student should be encouraged to finish those revisions and resubmit for a higher overall score.
- Recommend asking the student to submit a self-revision of the remaining paragraphs before another AI pass to evidence independent editing growth.

■■■■ Student Feedback ■ Rating: 5/5 ■ Comment: No additional comment provided.

Current Mode:assessment

## Complete Conversation

Assistant:

Original:

Task1

In 2023, the global of full-time equivalent employment exposed to automation by AI in Emerging Market (EM) and Developed Market (DM) economies.

First of all, Hong Kong has the peak of DM economies, almost have 30 percent. It had twice time more than Global which only 16 percent. Second of it, India was bottom out of EM compared with Argentina as less than 13 percent. Also, noticed that high developed countries were more high percentage on DM economies. And large amount of developing countries exposed to Automatic by AI to EM. In short, Hong Kong was the highest DM. India was the lowest EM. High developed countries represent by Hong Kong, US, UK and Euro Area. Developing countries represent by India, Kenya, Thailand, etc.

Task2

Technology enhancing day by day, many of industry are transforming to automation. Officially, it will cause your opportunities decrease but boosting efficiency. In the long-term, technological shift . In the long-term, technological shift automatically ultimately enhance global employment prospects. I contact that, technology help us exchange our life because of two reasons. People education level are higher and people have changed their mind to have other lifestyle. Sold it and enhance prospect in the long run.

For the first reason, people are noticed the importance of education nowadays. They are willing to pay more on education in order to get higher degree. As my part-time job manager as an example, she got master degree of BBA even she just a barrister. Although automation reduce jobs, it creates technological jobs. It required people have knowledge to use, control, fix the machine or AI. Future, people were smarter because all of them learning more things. Global employment won't lose their job, but get the more high skillful job.

furthermore, Z generation affected by last generation, they more relaxed to live a competitive environment. They accept themselves to be lazy, like water will go it place. A couple of friends a freelancer, slasher. They are not aspect a stable job. they are not worried about the future. Even they always joke that if AI instead of them, then they can go to travel around the road. Young people are peaceful to accept their future. As part of global citizens they are the future, they are changed the life way.

In short, global employment prospect enhance by technological. I believe that human being suitable live at any environment. They will find their own way to live. It won't be end of our story. They through education and change attitude to face.

Revised:

Task1

In 2023, AI automation exposed a larger share of employment in many Developed Markets (e.g., Hong Kong ≈30%) than in many Emerging Markets (e.g., India ≈13%). For example, Hong Kong had the highest exposure among Developed Markets at nearly 30 percent—almost twice the global average of about 16 percent—while India was among the lowest in Emerging Markets at roughly 13 percent. Overall, more highly developed economies (such as Hong Kong, the United States, the United Kingdom, and the Euro Area) tended to show higher percentages of employment exposed to automation. Several developing countries (for example, India, Kenya, and Thailand) showed lower exposure levels. In short, Hong Kong represented the highest exposure among DMs, and India represented the lowest among EMs.

Task2

Although automation reduces some jobs in the short term, technological change will ultimately enhance global employment prospects because higher levels of education create new technical jobs and younger generations adopt more flexible attitudes toward work.

As education levels rise, many workers increasingly view automation as an opportunity to retrain for technical roles rather than as an immediate threat to their jobs. People today are more willing to invest time and money in education and training to qualify for these new positions. For example, my part-time manager returned to school to earn a master's degree while continuing to work, which shows how some employees upgrade their skills to meet technological demands. While automation can reduce routine jobs, it also creates demand for workers who can operate, maintain, and develop machines and AI systems. Over time, this shift should expand higher-skill employment opportunities and reduce the risk of permanent job losses.

Officially, it will cause your opportunities decrease but boosting efficiency. In the long-term, technological shift . In the long-term, technological shift automatically ultimately enhance global employment prospects. I contact that, technology help us exchange our life because of two reasons. People education level are higher and people have changed their mind to have other lifestyle. Sold it and enhance prospect in the long run.

furthermore, Z generation affected by last generation, they more relaxed to live a competitive environment. They accept themselves to be lazy, like water will go it place. A couple of friends a freelancer, slasher. They are not aspect a stable job. they are not worried about the future. Even they always joke that if AI instead of them, then they can go to travel around the road. Young people are peaceful to accept their future. As part of global citizens they are the future, they are changed the life way.

In short, global employment prospect enhance by technological. I believe that human being suitable live at any environment. They will find their own way to live. It won't be end of our story. They through education and change attitude to face.

#### **Assistant:**

Hi there! ■ I'm your English writing coach, here to help you strengthen your essay through clear, focused revision. Before we dive in, we'll take a moment to set some goals together.

Here's how our session will work:

Negotiate your targets — We'll start by discussing what you want to improve most in your essay.

Get a quick diagnosis — I'll give you feedback on your essay based on key writing rubrics (like thesis, organization, evidence, and language).

Choose what to focus on — You'll decide which issues you'd like to work on first.

Then we'll move through a structured, three-step revision process:

Step 1: Revise your thesis statement.

Step 2: Choose one body paragraph and refine its topic sentence.

Step 3: Revise the rest of that paragraph for clarity and coherence.

My role is to guide you with questions, feedback, and examples—but you'll always lead the revisions yourself. ■

#### **You:**

In 2023, the global of full-time equivalent employment exposed to automation by AI in Emerging Market (EM) and Developed Market (DM) economies.

1.From this paragraph help me write a thesis statement.

2.And point out does here have any grammatical mistakes.

#### **Assistant:**

Thanks — this is a helpful start. Before I revise anything, let's quickly agree a target so I can focus my help where you most want it.

1) Goals — what would you most like to work on right now?

- Do you want me to: (A) create a clear, strong thesis from that paragraph, (B) point out and correct grammatical mistakes in the whole Task1 paragraph, or (C) do both (thesis + corrections)?

You already asked for a thesis and for grammar notes — is that what you want me to focus on? Please confirm.

## 2) Short diagnostic (based on the Task1 paragraph)

- Strengths: You've identified a clear comparison (Developed Markets vs Emerging Markets) and given specific examples (Hong Kong highest, India lowest). That gives us concrete facts to build a thesis from.
- Areas to improve (rubric-style):
  - Thesis & Argument: The opening sentence is unclear and doesn't state a main claim or preview the paragraph's comparisons.
  - Organization: The paragraph lists facts but needs clearer topic sentence and smoother transitions.
  - Language Use: Many grammatical errors (articles, verb forms, plural/singular, word choice, and punctuation) reduce clarity.
  - Evidence & Development: Numbers and comparisons are useful, but they should be stated clearly (e.g., "about 30%" vs "almost have 30 percent").

Please confirm you want both a thesis and grammatical corrections. Once you confirm, I'll:

- Step 1: Give feedback on the current thesis sentence and offer 2–3 thesis options. You can pick one or edit it.
- Also, I'll point out the main grammatical problems in the paragraph and provide a corrected version of Task1 that includes the new thesis.

If that sounds good, reply "Yes — do both" (or tell me if you want only the thesis or only grammar). Then I'll proceed.

**You:**

Yes do both

**Assistant:**

Great — thanks for confirming. Our agreed targets for this session:

- Create a clear, strong thesis for Task1.
- Correct grammatical and clarity problems in the entire Task1 paragraph.

We'll follow the three-step workflow. First I'll help you revise the thesis; once you're happy with it, I'll produce the corrected Task1 paragraph that uses that thesis.

Step 1 — Thesis feedback and options

Your current opening sentence:

"In 2023, the global of full-time equivalent employment exposed to automation by AI in Emerging Market (EM) and Developed Market (DM) economies."

Quick feedback:

- It's unclear and feels like a fragment (missing a clear verb or claim).
- It should state the main point (what the data shows) and preview the comparison between DM and EM economies.
- Use consistent, precise phrasing: e.g., "share of employment exposed to AI-driven automation," and introduce abbreviations after the full term (Developed Market (DM), Emerging Market (EM)).

Below are three thesis options. Pick one to use or edit it into your own sentence.

Option 1 (descriptive, clear):

In 2023, the share of full-time equivalent employment exposed to AI-driven automation was generally higher in Developed Market (DM) economies than in Emerging Market (EM) economies, with Hong Kong near 30% and India near 13%.

Option 2 (analytical, adds implication):

In 2023, Developed Market economies experienced greater exposure to AI automation than Emerging Markets—as shown by Hong Kong's nearly 30% figure versus India's roughly 13%—suggesting that more advanced economies face higher immediate automation risk.

Option 3 (concise, data-focused):

In 2023, AI automation exposed a larger share of employment in many Developed Markets (e.g., Hong Kong ≈30%) than in many Emerging

Markets (e.g., India ≈13%).

Which option would you like to use (1, 2, or 3)? Or would you like to edit one now or write your own? Once you confirm the thesis, I'll move to Step 2 and produce the full corrected Task1 paragraph using that thesis.

Brief note on the main grammar and clarity issues I'll fix in Task1 once you confirm the thesis:

- Sentence fragments and missing verbs (fix structure so each sentence is complete).
- Articles (a/the), plurals, and subject–verb agreement (e.g., “has” vs “had,” “are” vs “is”).
- Word choice and collocations (use “share” or “percentage of employment exposed to AI automation”).
- Numbers and comparisons phrased clearly (“about 30%” not “almost have 30 percent”).
- Remove repetition and unclear phrases (“bottom out,” “Automatic by AI to EM,” etc.).
- Improve transitions and organization so the paragraph flows logically.

Quick prompt: pick an option (1, 2, or 3) or paste a revised thesis you'd like to use. Then I'll provide the corrected full paragraph.

**You:**

Option 3

**Assistant:**

Great — thanks. You chose Option 3 as the new thesis. Before I revise Task1, quick check:

Are you happy to use this sentence as the paragraph's topic sentence/thesis?

In 2023, AI automation exposed a larger share of employment in many Developed Markets (e.g., Hong Kong ≈30%) than in many Emerging Markets (e.g., India ≈13%).

If yes, I'll proceed to Step 2–3 and give a corrected version of the full Task1 paragraph that uses this thesis. If you want to tweak any words in the thesis first, tell me now (keep it short).

Assuming you're happy with that thesis, here is the revised Task1 paragraph using it (full text):

**Task1**

In 2023, AI automation exposed a larger share of employment in many Developed Markets (e.g., Hong Kong ≈30%) than in many Emerging Markets (e.g., India ≈13%). For example, Hong Kong had the highest exposure among Developed Markets at nearly 30 percent—almost twice the global average of about 16 percent—while India was among the lowest in Emerging Markets at roughly 13 percent. Overall, more highly developed economies (such as Hong Kong, the United States, the United Kingdom, and the Euro Area) tended to show higher percentages of employment exposed to automation. Several developing countries (for example, India, Kenya, and Thailand) showed lower exposure levels. In short, Hong Kong represented the highest exposure among DMs, and India represented the lowest among EMs.

What I changed and why (brief):

- Replaced the unclear original opening with your chosen, clear thesis that answers the question and previews the comparison.
- Fixed sentence structure, articles, verbs, and number phrasing (e.g., “nearly 30%,” “about 16%,” “roughly 13%”) so the facts read smoothly.
- Improved organization: thesis → specific examples → general pattern → short conclusion.
- Removed unclear phrases and repetitions (e.g., “bottom out,” “Automatic by AI to EM”) and kept only supported claims.

Next step — quick choices:

- Would you like to revise the paragraph's final sentence (the brief conclusion) to be stronger or leave it as is?
- Or shall we move on to Task2 (if you want help there)?

If you want any small wording changes to the thesis or paragraph, try one quick edit and I'll give focused feedback.

**You:**

Revise thesis statement On task two

**Assistant:**

Thanks — good choice to focus on Task 2. Let's start with a quick negotiation and diagnosis so we're clear about goals before I suggest thesis options.

1) Quick target check

- Do you want me to:

A) revise only the Task 2 thesis statement, or

B) revise the thesis and also correct grammar/clarity in the rest of Task 2?

You wrote "Revise thesis statement On task two" — I'll assume A unless you tell me otherwise. Please confirm A (thesis only) or B (thesis + grammar).

2) Short diagnostic (Task 2) — rubric-style

- Strengths:

- You have clear ideas: technology increases automation, and you offer two supporting reasons (education and changed attitudes toward work).

- You use personal examples which could help make the argument concrete.

Areas to improve:

Thesis & Argument: There is no clear, confident thesis sentence that answers the prompt or previews the two reasons. The opening lines are fragmented and unclear.

Organization: The paragraph needs a clear roadmap so readers know you will explain two reasons.

Evidence & Development: Examples are conversational but need clearer explanation and relevance to the thesis.

Language Use: Many grammar and word-choice errors (verb forms, articles, plural/singular, sentence fragments), plus informal or unclear phrasing.

3) Which issue should we focus on now?

- From the list above, which do you want to work on in this session? (Choose one or two)

- 1 = Thesis & Argument (recommended now)

- 2 = Organization (topic sentence + roadmap)

- 3 = Language/grammar

Pick the number(s). If you confirm you want only the thesis, I'll proceed with Step 1 now.

Step 1 — Thesis revision (Task 2)

First, please confirm you want only the thesis revised (A) or both thesis + grammar (B). If A, here is the current opening sentence I see in your draft (which looks intended as the thesis):

"Technology enhancing day by day, many of industry are transforming to automation."

Quick feedback on that line:

- It's a fragment and unclear. Make it a full sentence that states your claim (technology will ultimately improve global employment prospects) and previews your two reasons (higher education levels and changed attitudes/lifestyles).

Below are three thesis options. Try to choose one to use or quickly edit it to make it your own. I encourage you to pick one and, if you like, rewrite it in your own words before I replace it in the paragraph.

**Option 1 — Clear, balanced claim:**

Although automation reduces some jobs in the short term, technological change will ultimately enhance global employment prospects because higher levels of education create new technical jobs and younger generations adopt more flexible attitudes toward work.

**Option 2 — More concise, data-free:**

In the long run, advances in technology will improve global employment prospects by creating new high-skill roles and encouraging people to adapt their education and lifestyles.

**Option 3 — Cause-and-effect emphasis:**

Technological automation will transform, rather than destroy, employment: rising education levels enable workers to take on new technical roles, and changing work attitudes among younger generations make the labor market more adaptable.

Which option do you want to use (1, 2, or 3)? Or paste a short edited thesis of your own (one sentence). Once you confirm, I will:

- Replace the opening sentence of Task 2 with the chosen thesis and show you the full Task 2 paragraph with that thesis in place.
- I will not rewrite the rest of the paragraph unless you asked for B.

Next step: pick a thesis option (1, 2, or 3) or paste your own.

**You:**

Option1

**Assistant:**

Nice choice — Option 1 is a strong thesis. Quick feedback on that sentence before I insert it: it states a clear claim (technology ultimately helps employment), previews the two reasons (education + attitudes), and uses confident language (no hedging). It meets our revision criteria.

Here is Task 2 with your chosen thesis (Option 1) replacing the original opening sentence. I did not change the rest of the paragraph(s) because you asked to revise the thesis only:

**Task2**

Although automation reduces some jobs in the short term, technological change will ultimately enhance global employment prospects because higher levels of education create new technical jobs and younger generations adopt more flexible attitudes toward work. Officially, it will cause your opportunities decrease but boosting efficiency. In the long-term, technological shift . In the long-term, technological shift automatically ultimately enhance global employment prospects. I contact that, technology help us exchange our life because of two reasons. People education level are higher and people have changed their mind to have other lifestyle. Sold it and enhance prospect in the long run.

For the first reason, people are noticed the importance of education nowadays. They are willing to pay more on education in order to get higher degree. As my part-time job manager as an example, she got master degree of BBA even she just a barrister. Although automation reduce jobs, it creates technological jobs. It required people have knowledge to use, control, fix the machine or AI. Future, people were smarter because all of them learning more things. Global employment won't lose their job, but get the more high skillful job.

furthermore, Z generation affected by last generation, they more relaxed to live a competitive environment. They accept themselves to be lazy, like water will go it place. A couple of friends a freelancer, slasher. They are not aspect a stable job. they are not worried about the future. Even they always joke that if AI instead of them, then they can go to travel around the road. Young people are peaceful to accept their future. As part of global citizens they are the future, they are changed the life way.

In short, global employment prospect enhance by technological. I believe that human being suitable live at any environment. They will find their own way to live. It won't be end of our story. They through education and change attitude to face.

**Next steps (quick choices)**

- 1) Are you happy with this thesis wording as-is, or would you like to tweak one phrase? (If you want a small edit, try one short change and I'll give focused feedback.)
- 2) Which body paragraph would you like to work on next for Step 2 (topic sentence revision)?
  - A = the paragraph beginning "For the first reason..." (education paragraph) — recommended
  - B = the paragraph beginning "furthermore, Z generation..." (attitudes paragraph)

Pick 1 (ok/tweak) and 2 (A or B). Once you confirm, we'll move to Step 2: review the paragraph's topic sentence and I'll guide you to revise it so it clearly connects to the thesis. Would you like to try revising the chosen topic sentence yourself first, or would you like a model suggestion to work from?

**You:**

Task 2 revise the topic sentence

**Assistant:**

Good — we'll work on Task 2's topic sentence. Quick check before I give feedback:

Which paragraph do you want to revise the topic sentence for?

A = the paragraph that begins "For the first reason..." (about education)

B = the paragraph about younger generations and attitudes

(I recommend A — the education paragraph — because it should link directly to your thesis.)

Please confirm A or B. Also tell me: would you like to try rewriting the topic sentence yourself first, or would you like me to suggest one or two example topic sentence options to choose from? I'll give feedback either way.

**You:**

A

**Assistant:**

Great — thanks for confirming. We'll work on the education paragraph (the one that begins "For the first reason...").

Before I give examples, would you like to try writing the revised topic sentence yourself? Try one sentence that:

- clearly links to your thesis (education creates new technical/highskill jobs),
- states the paragraph's main idea (education helps workers move into those jobs),
- uses confident, precise language (no hedging).

Quick checklist to guide you:

1. Start by naming education or skills training.
2. Say how it affects employment (creates/replaces with new technical roles).
3. Keep it one clear sentence.

Would you like to try now? Paste your sentence and I'll give focused feedback.  
If you prefer, I can instead show 2 short example topic sentences — tell me which you want.

**You:**

People perspective are changing because of the future job opportunities

**Assistant:**

Nice attempt — good idea and a clear direction. Quick, specific feedback on your sentence:

Grammar: use the possessive and plural: "People's perspectives" (not "People perspective").

Verb agreement: "are changing" is fine, but make the cause clearer.

Clarity: "because of the future job opportunities" is vague — link it to your thesis (education and new technical jobs).

A corrected version of your sentence that keeps your original words would be:

"People's perspectives are changing because of future job opportunities."

But to connect the sentence more clearly to your thesis (education creates new technical jobs and changes attitudes), try one of these topic-sentence options. Pick one to use or edit, or use them as models to try your own rewrite:

Option 1 (directly links to the thesis):

"Higher levels of education are shifting people's perspectives by enabling them to pursue the new technical and higher skill jobs created by automation."

Option 2 (emphasizes attitude change and retraining):

"As education levels rise, many workers increasingly view automation as an opportunity to retrain for technical roles rather than as an immediate threat to their jobs."

Option 3 (concise, cause → effect):

"Improved education equips workers to transition into technical roles generated by automation, changing attitudes toward employment."

Which option do you want to use (1, 2, or 3)? Or would you like to try revising your original sentence now using these tips? Once you confirm the topic sentence, we'll move to Step 3 and revise the paragraph's supporting sentences so they clearly support this sentence.

**You:**

Option 2

**Assistant:**

Good — Option 2 is a strong topic sentence. Quick next step: how would you like to proceed with revising the supporting sentences in that education paragraph?

Would you like to:

- A) Try rewriting the supporting sentences now (paste your revision) and I'll give targeted feedback, or
- B) Ask me to suggest focused corrections and then I'll provide a revised version of that paragraph (and, because you asked earlier, the full Task2 text with the chosen thesis and revised paragraph)?

If you pick A, I'll keep feedback short and help you polish. If you pick B, I'll produce a corrected paragraph that keeps your ideas but fixes grammar, clarity, and coherence. Which do you want?

**You:**

B

**Assistant:**

Great choice — thank you. Below is the full Task 2 with your chosen thesis (Option 1) and a revised education paragraph that uses the topic sentence you picked (Option 2) and cleans the supporting sentences for clarity, unity, and grammar. I changed only the thesis and the education paragraph (as you requested); I left the rest of Task 2 as it was so you can decide whether to revise those parts next.

**Task2**

Although automation reduces some jobs in the short term, technological change will ultimately enhance global employment prospects because higher levels of education create new technical jobs and younger generations adopt more flexible attitudes toward work.

As education levels rise, many workers increasingly view automation as an opportunity to retrain for technical roles rather than as an immediate threat to their jobs. People today are more willing to invest time and money in education and training to qualify for these new positions. For example, my part-time manager returned to school to earn a master's degree while continuing to work, which shows how some workers upgrade their skills to meet technological demands. Although automation can reduce routine jobs, it also creates demand for people who can operate, maintain, and develop machines and AI systems. Over time, this shift should increase the number of higher-skill employment opportunities and reduce the risk of permanent job losses.

Officially, it will cause your opportunities decrease but boosting efficiency. In the long-term, technological shift . In the long-term, technological shift automatically ultimately enhance global employment prospects. I contact that, technology help us exchange our life because of two reasons. People education level are higher and people have changed their mind to have other lifestyle. Sold it and enhance prospect in the long run.

For the first reason, people are noticed the importance of education nowadays. They are willing to pay more on education in order to get higher degree. As my part-time job manager as an example, she got master degree of BBA even she just a barrister. Although automation reduce jobs, it creates technological jobs. It required people have knowledge to use, control, fix the machine or AI. Future, people were smarter because all of them learning more things. Global employment won't lose their job, but get the more high skillful job.

furthermore, Z generation affected by last generation, they more relaxed to live a competitive environment. They accept themselves to be lazy, like water will go it place. A couple of friends a freelancer, slasher. They are not aspect a stable job. they are not worried about the future. Even they always joke that if AI instead of them, then they can go to travel around the road. Young people are peaceful to accept their future. As part of global citizens they are the future, they are changed the life way.

In short, global employment prospect enhance by technological. I believe that human being suitable live at any environment. They will find their own way to live. It won't be end of our story. They through education and change attitude to face.

What I changed (brief):

- Replaced the original fragmented opening with the clear thesis you selected (Option 1).
- Rewrote the education paragraph so it:
- Uses your chosen topic sentence (Option 2).
- Connects the supporting examples logically to that sentence.

- Fixes grammar, verb forms, articles, and phrasing for clarity while keeping your original idea and example.

Next choices (pick one):

- I can revise the rest of Task 2 (the attitudes paragraph and conclusion) to match the tone and fix grammar — I recommend this next. (I'll do one paragraph at a time if you prefer.)
- Or you can try rewriting the attitudes paragraph now and I'll give focused feedback.

Which would you like? If you want me to continue, say "Please revise the attitudes paragraph" (or "Please proofread the whole Task 2") and I'll proceed.

You:

How about the body paragraph 1?

Assistant:

Do you mean the first body paragraph of Task 2 (the education paragraph we worked on)? If so, great — I can help. Quick plan so we stay focused:

1) Quick diagnostic of that paragraph (2–3 bullets)

- Strengths: clear topic sentence (you chose Option 2) that links education to retraining; you include a concrete example (your part-time manager) which helps make the point.
- Improvements to focus on: a few grammar and article issues remain, some sentences are repetitive or choppy, and the example could be tied more explicitly to the claim (show exactly how it supports the topic sentence).

2) Pick a target for this revision (choose one)

- A = I'll guide you to rewrite the supporting sentences (you try first; I'll give feedback).
- B = I'll produce a corrected, polished version of this paragraph now (I'll keep your ideas and example but fix grammar, clarity, and flow).

Which do you want (A or B)? If you pick A, paste your revision and I'll give focused suggestions. If you pick B, say "Please revise it" and I'll post the full polished paragraph. Would you like to try one quick edit yourself first, or shall I go ahead and revise?

You:

Please revise it

Assistant:

Nice — thanks for asking me to revise the education paragraph. Below is the full Task 2 text with the chosen thesis and a polished, tightened version of the education paragraph. I only changed the thesis and that paragraph, as you requested; the rest of Task 2 is unchanged so you can decide what to do next.

Task2

Although automation reduces some jobs in the short term, technological change will ultimately enhance global employment prospects because higher levels of education create new technical jobs and younger generations adopt more flexible attitudes toward work.

As education levels rise, many workers increasingly view automation as an opportunity to retrain for technical roles rather than as an immediate threat to their jobs. Today, more people are willing to invest time and money in education and vocational training to qualify for these new positions. For example, my part-time manager returned to school to earn a master's degree while continuing to work, which shows how some employees

upgrade their skills to meet technological demands. While automation can reduce routine jobs, it also creates demand for workers who can operate, maintain, and develop machines and AI systems. Over time, this shift should expand higher-skill employment opportunities and reduce the risk of permanent job losses.

Officially, it will cause your opportunities decrease but boosting efficiency. In the long-term, technological shift . In the long-term, technological shift automatically ultimately enhance global employment prospects. I contact that, technology help us exchange our life because of two reasons. People education level are higher and people have changed their mind to have other lifestyle. Sold it and enhance prospect in the long run.

For the first reason, people are noticed the importance of education nowadays. They are willing to pay more on education in order to get higher degree. As my part-time job manager as an example, she got master degree of BBA even she just a barrister. Although automation reduce jobs, it creates technological jobs. It required people have knowledge to use, control, fix the machine or AI. Future, people were smarter because all of them learning more things. Global employment won't lose their job, but get the more high skillful job.

furthermore, Z generation affected by last generation, they more relaxed to live a competitive environment. They accept themselves to be lazy, like water will go it place. A couple of friends a freelancer, slasher. They are not aspect a stable job. they are not worried about the future. Even they always joke that if AI instead of them, then they can go to travel around the road. Young people are peaceful to accept their future. As part of global citizens they are the future, they are changed the life way.

In short, global employment prospect enhance by technological. I believe that human being suitable live at any environment. They will find their own way to live. It won't be end of our story. They through education and change attitude to face.

What I changed (brief):

- Tightened and clarified the topic sentence so it directly links to your thesis.
- Fixed grammar, articles, and verb forms throughout the paragraph.
- Smoothed the flow: thesis → general claim → concrete example → consequence.

Would you like to:

- A) Revise the attitudes paragraph next (the paragraph about Generation Z), or
- B) Ask me to proofread and revise the rest of Task 2 (the remaining body paragraphs and conclusion)?

If you pick A or B, tell me whether you want to try one quick edit yourself first or want me to provide a polished revision.
