Contribution Analysis

Thank you for sharing your essay excerpts! Here is a carefully revised version of all the text you provided, focusing on improved grammar, clearer views, and stronger logic, while preserving your original meaning and style as much as possible:

Revised Thesis Statement:
The advancement of automation technology, particularly artificial intelligence, will enhance global employment prospects in the long term by creating new types of jobs and improving workplace efficiency, even though some manual positions will be phased out.

Revised Body Paragraph Sentences:
Similarly, AI automation technology may displace some traditional workers while creating new opportunities in data analysis and technical maintenance.
On the other hand, technological development enables firms to improve their efficiency and productivity, fostering economic growth. As companies expand to increase profits, they will hire more employees.

Revised Paragraph on Human Impact:
Despite the challenges and debates surrounding this process, automation will ultimately benefit human development. It allows people to focus more on creative and innovative work, which leads to greater satisfaction in both work and life and improves workplace safety. For example, many dangerous tasks can be performed by machinery instead of humans, reducing risk.
Although the transition may be difficult and some manual workers might experience short-term unemployment, governments and educational organizations should invest in training programs to help society adapt to the high-tech pace. With these efforts, the automation revolution can be truly successful.

Revised Conclusion:
In conclusion, the effects of automation on employment are more positive in the long term than in the short term. As technology continues to

develop, the future of employment is full of potential and opportunity.

If you want, I can help you integrate these revisions into your full essay draft or assist with further polishing specific paragraphs or sections. Would you like to proceed with that?

not finished

STUDENT ASSESSMENT REPORT

Course: LANG 0036 - Enhancing English through Global Citizenship

Module: AI for Revising Essays

ESSAY WRITING ASSESSMENT

Original Essay Scores:

- **Content and Ideas:** 18/25
  Justification: The essay attempts to address the impacts of automation on employment and provides some historically relevant points (e.g., industrial revolution), but reasoning is often vague, development is under-explained, and some ideas/reasons are repeated rather than extended.

- **Organization:** 16/25
  Justification: The paragraphs are somewhat structured but there is significant repetition (introduction duplicated), topic sentences are often unclear, ideas do not consistently build on one another, and transitions are weak.

- **Vocabulary:** 15/25
  Justification: The vocabulary covers some topic-specific words (automation, AI, employment), but inaccuracies and awkward phrasing ("employment prospects is full potential and absolute") are frequent. Some word choices are incorrect or unclear.

- **Grammar:** 14/25
  Justification: There are frequent grammatical errors (subject-verb agreement, sentence fragments, tense, prepositions) that disrupt meaning and clarity.

- **Original Essay Total:** 63/100

Revised Essay Scores:

- **Content and Ideas:** 21/25
  Justification: The revised essay is more focused; the thesis is clearer and development of ideas about automation's impact is better structured. Supporting details (industrial revolution; workplace safety) are more explicit, but some points could still be elaborated.

- **Organization:** 20/25
  Justification: Paragraphing is clearer and logical progression is improved. The essay has a stronger introduction and conclusion, and body paragraphs group ideas with better topic focus. Some transitions between ideas (e.g., short-term/long-term effects) can be further improved.

- **Vocabulary:** 20/25
  Justification: Vocabulary is more precise ("innovative work," "economic growth," "data analysis"), with better use of academic phrasing. A few awkward wordings persist but overall accuracy is higher.

- **Grammar:** 19/25
  Justification: Most grammar errors are corrected in the revision, but a few issues remain ("it also open up new opportunity"; missing agreement, article usage in places). Sentence structure is much clearer and understandable overall.

- **Revised Essay Total:** 80/100

Essay Improvement Analysis:

- **Overall Improvement:** +17 points

- **Key Improvements Made:**

- Stronger, more focused thesis statement.

- Clearer paragraph topic sentences and logical development of main ideas.

- Improved grammar and sentence structure for coherence and academic tone.

- **Missed Opportunities:**

- Additional topic-specific evidence/examples (case studies, data) could further strengthen arguments.

- More nuanced consideration of short-term social/economic impacts ("transition period") and possible challenges of automation.

HUMAN-AI INTERACTION ASSESSMENT

Chat History Analysis:

- **Total Exchanges:** 19 (student: 10, assistant: 9)

- **Conversation Quality:** The student engaged in several back-and-forth exchanges about revision, made requests for direct modification, and provided multiple segments of the essay for targeted feedback. However, the process was frequently short-circuited by requests for direct rewriting rather than attempting independent revision as coached. There's some negotiation of priorities but limited self-led writing.

Interaction Scores:

- **In-Depth Conversation:** 3/5
  Justification: The conversation was adequate, with student responding to guiding questions, providing paragraph texts, and following up on the assistant's feedback. Exchanges were relatively brief and tended to ask the assistant to do the revision rather than fully engaging in self-editing or generating multiple ideas.

- **Critical Review of AI Suggestions:** 2/5
  Justification: The student mostly accepted AI suggestions with little explicit evaluation or reasoning. Requests for "direct modification" were repeated; there was limited analysis or discussion of why changes were made, or any evidence of questioning AI proposals.

- **Refining Process:** 2/5
  Justification: The iterative process was minimal. The student provided portions of the essay for revision but did not thoroughly engage in multiple revision cycles or attempt several drafts. Progress largely depended on direct edits from the assistant.

- **Human-AI Interaction Total:** 7/15

OVERALL PERFORMANCE SUMMARY

Strengths Demonstrated:

- Willingness to engage in targeted revision (sharing specific sections for feedback).

- Identification of revision priorities (grammar, logic, argument strength).

- Noticeable improvement in essay clarity, structure, and language use following revision.

Areas for Improvement:

- More active participation in the revision process: Try self-editing before requesting AI to rewrite.

- Greater critical analysis of feedback: Discuss why suggested changes work or don't work for your argument.

- Develop ideas further: Provide more specific evidence and address complex dimensions of the topic.

AI Collaboration Skills Assessment:

- **Context Provision:** Good
  Evidence: Student specified target areas ("grammar, enhance my views, modify my logic") and shared relevant essay sections; but could give deeper background/context (e.g., course goals, desired outcomes).

- **Strategic Planning:** Needs Improvement
  Evidence: The student chose priorities but did not consistently engage with a stepwise revision plan, relying on AI to lead.

- **Critical Evaluation:** Needs Improvement
  Evidence: Minimal questioning or justification of suggested changes; passive acceptance.

- **Independent Editing:** Needs Improvement
  Evidence: Rather than attempting revisions first, student repeatedly requested direct modification by AI.

RECOMMENDATIONS FOR FUTURE DEVELOPMENT

1. **Essay Writing:** Try to extend paragraphs with more specific, real-world examples and deeper analysis. Pay attention to transitions and paragraph focus for stronger argument progression.

2. **AI Collaboration:** Actively attempt revisions before asking for direct fixes; use AI feedback for reflection and discussion; explain your reasoning for accepting/rejecting suggestions.

3. **Overall Improvement:** Practice independent drafting and editing, and challenge yourself to critically evaluate all feedback for deeper learning impact.

INSTRUCTOR NOTES

- The student made significant progress in essay clarity and organization, with clear improvement in grammar and vocabulary.

- However, the revision process was largely dependent on direct AI rewriting. Increased emphasis on student-led drafting and iterative self-editing is recommended for future modules.

- Further encouragement and scaffolding may help the student develop stronger analytical and collaborative skills—consider peer review or structured reflection activities after AI-assisted sessions.

▉▉▉ Student Feedback

■ **Rating:** 5/5 ■ **Comment:** No additional comment provided.

Complete Conversation

Assistant:

Original:
As the advancement of automation technology, particularly artificial intelligence, various new positions emerge, but some manual jobs will be cancelled. However, from my perspective, technological shift ultimately enhance global employment prospects in the long term.
Most people argue that technology sustainably develop that will displace manual human so that the rate of unemployment will increase. However, I believe that automation provides opportunities are more that it eliminated. For example, reviewing the history, industrial revolution replace some traditional manual jobs with machinery, but at the same time, it also creates many new jobs in engineering and tech maintenance, and manufacture. Similarly, AI automation technology may displace some traditional workers while it build new opportunity in data analysis, tech maintenance.
On the other hand, with the development of technology, the firms are able to improve their efficiency and productivity and foster economic growth so that they can expend their scale to achieve more profit by employing additional employee.
Although this process faces many challenge and debate, eventually, they will improve human development human. There are many time that human can focus on creative and innovative works. They are satisfied to work and life, and safety to work. For instance, many dangerous tasks will be finished by machinery instead of human. All in all, automation will change positively human's life.

Although transition is difficult and face problem like so that many manual workers will unemployment, it's short run. According to long-term, government and educational organization should allocate to foster skills in AI so that societies adapt the high-tech pace. After that, automative revolution is truly successful.

In the conclusion, automation effect on employment is positive in long-term than in short-term. Technological development prospects is full potential and hopeful in employment.

As the development of automation, employment prospects is full potential and absolute. As the advancement of automation technology, particularly artificial intelligence, various new positions emerge, but some manual jobs will be cancelled. However, from my perspective, technological shift ultimately enhance global employment prospects in the long term.

Most people argue that technology sustainably develop that will displace manual human so that the rate of unemployment will increase. However, I believe that automation provides opportunities are more that it eliminated. For example, reviewing the history, industrial revolution replace some traditional manual jobs with machinery, but at the same time, it also creates many new jobs in engineering and tech maintenance, and manufacture. Similarly, AI automation technology may displace some traditional workers while it build new opportunity in data analysis, tech maintenance.

On the other hand, with the development of technology, the firms are able to improve their efficiency and productivity and foster economic growth so that they can expend their scale to achieve more profit by employing additional employee.

Although this process faces many challenge and debate, eventually, they will improve human development human. There are many time that human can focus on creative and innovative works. They are satisfied to work and life, and safety to work. For instance, many dangerous tasks will be finished by machinery instead of human. All in all, automation will change positively human's life.

Although transition is difficult and face problem like so that many manual workers will unemployment, it's short run. According to long-term, government and educational organization should allocate to foster skills in AI so that societies adapt the high-tech pace. After that, automative revolution is truly successful.

In the conclusion, automation effect on employment is positive in long-term than in short-term. Technological development prospects is full potential and hopeful in employment.

As the development of automation, employment prospects is full potential and absolute.

Revised:

With the advancement of automation technology, especially artificial intelligence, new job roles are emerging■though some manual positions will be phased out. From my perspective, however■technological will ultimately boost global employment prospects in the long term.

Most people claim that technological progress will displace human labor driving up unemployment rates. Yet I believe that automation creates more opportunities than it eliminates. Take the industrial revolution as an example■while machinery replaced some traditional manual jobs ■it also generated new roles in engineering technical maintenance and manufacturing. Similarly, AI- driven automation may displace certain traditional workers ■but it also open up new opportunity in field like data analysis and tech maintenance.

On the other hand, technological development allows companies to boost efficiency and productivity, which fuels economic growth. As businesses expand to increase profits, they will hire more employee.

While this transition involves challenges and debates, it will ultimately promote human progress. Automation also enables humans to focus more on creative and innovative work. This improves work-life balance and workplace safety: for example, dangerous tasks can be completed by machinery instead of people. In short, automation will have a positive impact on human life.

While this transition is challenging-for instance, some manual workers may face short-term unemployment – governments and educational institutions should collaborate to train people in AI-related skills, helping society keep up with technological advances. Only then can the automative revolution is fully succeed.

In conclusion, the effects of automation on employment are more positive in the long term than in the short term. As technology continues to develop, the future of employment is full of potential and opportunity.

Assistant:

Hi there! ■ I'm your English writing coach, here to help you strengthen your essay through clear, focused revision. Before we dive in, we'll take a moment to set some goals together.

Here's how our session will work:

Negotiate your targets — We'll start by discussing what you want to improve most in your essay.
Get a quick diagnosis — I'll give you feedback on your essay based on key writing rubrics (like thesis, organization, evidence, and language).
Choose what to focus on — You'll decide which issues you'd like to work on first.
Then we'll move through a structured, three-step revision process:

Step 1: Revise your thesis statement.
Step 2: Choose one body paragraph and refine its topic sentence.
Step 3: Revise the rest of that paragraph for clarity and coherence.

My role is to guide you with questions, feedback, and examples—but you'll always lead the revisions yourself. ■

You:

As the advancement of automation technology, particularly artificial intelligence, various new positions emerge, but some manual jobs will be cancelled. However, from my perspective, technological shift ultimately enhance global employment prospects in the long term.

Assistant:

Fantastic, let's begin the revision process!
Preliminary Stage: Negotiating Targets and Diagnosing the Essay

1. Negotiate Targets

Before we start, could you share your personal goals for this essay?
For example, are you mainly hoping to improve:

- Clarity of your ideas

- The strength of your argument

- The structure and organization

- Grammar and sentence accuracy

- The academic style and vocabulary

Which 2-3 of these do you want to focus on in today's session? Or is there anything else you have in mind?

2. Diagnostic Feedback: Using a Rubric

I've read your draft. Here's some quick feedback, using common essay scoring criteria:

a) Thesis & Argument
- **Strength:** You present a clear opinion and try to answer the essay question.
- **Area for improvement:** The thesis needs to be more direct and preview your main points. The argument could be expressed in a stronger, more logical way.

b) Organization
- **Strength:** You have several body paragraphs and attempt examples.
- **Area for improvement:** Some paragraphs repeat each other or lack a clear focus; ideas sometimes jump or are unclear.

c) Evidence & Development
- **Strength:** You give some reasons and examples (e.g., the industrial revolution).

- **Area for improvement:** Examples and explanations could be clearer and more specific; some sentences are hard to follow.

d) Language Use
- **Strength:** You are attempting complex ideas and vocabulary.
- **Area for improvement:** There are frequent grammar mistakes that affect clarity (e.g., verb forms, singular/plural, word choice); some sentences are confusing.

3. Student Priority Selection

Out of these areas:
- Stronger thesis & topic sentences (argument & clarity)
- More logical and clearer paragraph structure
- More specific and clear examples/explanations
- Grammar and language clarity

Which would you most like to improve today? Which TWO would you say are your priorities?

Once you've chosen, I'll confirm our targets and we'll move to Step 1 (starting with your thesis statement)!

You:

Modify my grammar, enhance my views, and modify my logic.

Assistant:

Thank you for sharing your priorities!
So, for today's session, our main revision targets will be:

1. **Grammar and Language Clarity:** Improve sentence accuracy and correct grammar errors.

2. **Argument and Logic:** Make your ideas and reasoning clearer and stronger.

We'll focus on these while we work through:

- Your thesis statement (main claim/argument)

- One body paragraph (topic sentence + supporting sentences)

Let's get started!

STEP 1 — Thesis Statement Revision

Your Original Thesis Statement:

As the advancement of automation technology, particularly artificial intelligence, various new positions emerge, but some manual jobs will be cancelled. However, from my perspective, technological shift ultimately enhance global employment prospects in the long term.

Feedback:
- The sentence is a little long and could be clearer.
- Subject–verb agreement ("enhance" should be "enhances").
- The thesis should directly state your position and preview *why* you believe automation is positive for global employment in the long-term.
- Try to make it confident—avoid "from my perspective" and say what *will* happen.

Guiding Questions:
- What are the *main reasons* you think automation will enhance employment?
- Example: "creates new jobs," "improves workplace safety," "requires new skills"

Would you like to try rewriting your thesis statement now?
Aim for ONE strong sentence that directly states your position and briefly previews your main reasons.

If you want to attempt, please write your revised thesis below! If you prefer a model, let me know and I'll help.

You:

Can you modify my original text directly?

Assistant:

Absolutely! We'll revise your original thesis statement together, working step by step and focusing on **grammar/language clarity** and **argument strength**—the targets you chose.

Here's your original thesis statement again:

As the advancement of automation technology, particularly artificial intelligence, various new positions emerge, but some manual jobs will be cancelled. However, from my perspective, technological shift ultimately enhance global employment prospects in the long term.

Let's break down where to improve:

1. **Grammar**: Correct verb forms and word choices.

2. **Clarity**: Make the argument concise and easy to follow.

3. **Argument Strength**: Clearly state: automation will improve employment in the long-term, and briefly say *why*.

Direct Guidance and Suggestions

Let's try making it **one strong sentence**:

- Start with "The advancement of automation technology, especially artificial intelligence, will..."

- Assert your view clearly (not "from my perspective," but "will" or "is expected to," etc.).

- Preview your reasons (for example: "by creating new types of jobs and making work safer and more productive").

Your Turn!

Try writing a new version of your thesis, using this structure if you like:

> "The advancement of automation technology, especially artificial intelligence, will enhance global employment in the long term by [reason 1] and [reason 2]."

You can choose reasons such as:
- creating new job opportunities
- improving safety
- increasing productivity
- requiring new skills

Would you like to try revising your thesis now? Write your new thesis below—and I'll help you polish it!

If you'd like me to show a direct rewrite of your text for inspiration, I can show you what yours might look like first. Just let me know: do you want to attempt your own first, or see a sample based on your original?

You:

Most people argue that technology sustainably develop that will displace manual human so that the rate of unemployment will increase. However, I believe that automation provides opportunities are more that it eliminated. For example, reviewing the history, industrial revolution replace some traditional manual jobs with machinery, but at the same time, it also creates many new jobs in engineering and tech maintenance, and manufacture.

Assistant:

Thank you for sharing your priorities and your draft ideas!
Let's continue working step by step on revision.

Step 1 — Thesis Statement Revision

You've provided two possible sentences for your thesis ideas:

> Most people argue that technology sustainably develop that will displace manual human so that the rate of unemployment will increase. However, I believe that automation provides opportunities are more that it eliminated. For example, reviewing the history, industrial revolution replace some traditional manual jobs with machinery, but at the same time, it also creates many new jobs in engineering and tech maintenance, and manufacture.

Let's refocus on writing **one strong thesis statement** for your essay.

Suggestions Based on Your Draft:

- Try to state your own position **directly** and **confidently**.

- Only summarize main ideas—not all the evidence yet.

- Use correct grammar and clear vocabulary.

Possible Structure:

The advancement of automation technology, especially artificial intelligence, will enhance global employment in the long term by creating new kinds of jobs and improving workplace productivity.

Would you like to try writing your own, using this pattern?
Please give your revised thesis statement here.

You can mention **2 main reasons** for your argument in one clear sentence.
Ex: creating new jobs, increasing safety and efficiency, requiring new skills, etc.

Your Turn!
Type your revised thesis statement below, and I'll give you feedback and ideas to strengthen it even more.

If you want an example, let me know! Otherwise, have a go—just one sentence is fine. ■

You:

Can you modify my original text directly?

Assistant:

Absolutely! I'll help you **modify your original thesis statement directly**—while addressing your targets:
(1) grammar and clarity, and **(2) argument strength.**

Here's your original thesis:

As the advancement of automation technology, particularly artificial intelligence, various new positions emerge, but some manual jobs will be cancelled. However, from my perspective, technological shift ultimately enhance global employment prospects in the long term.

Directly Revised Thesis Statement (based on your original):

Revised Version:
The advancement of automation technology, particularly artificial intelligence, will enhance global employment prospects in the long term by creating new types of jobs and improving workplace efficiency, even as some manual positions disappear.

Key Changes:

- Fixed grammar ("will enhance" instead of "enhance").
- Clear, confident language (no "from my perspective"—direct statement).
- Briefly previewed reasons: "creating new types of jobs and improving workplace efficiency."
- Acknowledged that some manual jobs will be lost, but overall impact is positive.

Would you like to use this revision or make further changes?
Are there any other ideas or reasons you want to include in your thesis statement?

Let me know if you're satisfied with this version, or if you want to try revising it more. If you approve, we'll move to **Step 2: Topic Sentence Revision!** ■

You:

Similarly, AI automation technology may displace some traditional workers while it build new opportunity in data analysis, tech maintenance.
On the other hand, with the development of technology, the firms are able to improve their efficiency and productivity and foster economic growth so that they can expend their scale to achieve more profit by employing additional employee.

Assistant:

Thank you for sharing those sentences from your body paragraph!
Before we work on the topic sentence, let's confirm our process:

STEP 2 — Topic Sentence Revision

Let's pick **one body paragraph** to focus on.
From what you've shared, these two sentences seem to be from the **second body paragraph**, which is about:

> How automation helps companies/firms be more efficient and grow, which leads to more employment.

Is that correct?
Or would you prefer to work on a different paragraph?
Let's use the sentences you gave:

> Similarly, AI automation technology may displace some traditional workers while it build new opportunity in data analysis, tech maintenance.
> On the other hand, with the development of technology, the firms are able to improve their efficiency and productivity and foster economic growth so that they can expend their scale to achieve more profit by employing additional employee.

Original Topic Sentence (from your paragraph):

The first sentence appears to be:

> Similarly, AI automation technology may displace some traditional workers while it build new opportunity in data analysis, tech maintenance.

Feedback:

- The grammar needs improvement ("it build" → "it builds"; "new opportunity" → "new opportunities").

- The sentence combines two ideas (job loss and job creation). Let's make it clear what the paragraph will focus on.

- The topic sentence should connect to your thesis: automation has a positive impact by creating new jobs and improving efficiency.

Guiding Questions:

- Does this paragraph focus more on *new jobs* in technology fields, or on *company growth and hiring more employees*?

- What is the main message you want the reader to understand from this paragraph?

Try Revising the Topic Sentence!

Here's a possible structure:

Automation technology not only replaces certain manual jobs but also creates new opportunities in fields such as data analysis and technical maintenance.

Or, if you want to focus on company growth:

Advancements in automation help businesses become more efficient and productive, which encourages economic growth and creates new employment opportunities.

Would you like to try revising your topic sentence?
You can use one of the ideas above, or write your own version.
Aim for one clear sentence that previews what the paragraph will discuss.

Your Turn!
Please write a *revised topic sentence* for your paragraph, making sure it connects logically to your thesis statement.
Once you've written it, I'll help you polish the grammar and clarity!

Let me know when you're ready—or if you'd like more hints or a model. ∎

After you revise your topic sentence and confirm it's clear, we'll move to Step 3: improving and clarifying the supporting sentences in your paragraph!

You:

Although this process faces many challenge and debate, eventually, they will improve human development human. There are many time that human can focus on creative and innovative works. They are satisfied to work and life, and safety to work. For instance, many dangerous tasks will be finished by machinery instead of human. All in all, automation will change positively human's life.

Although transition is difficult and face problem like so that many manual workers will unemployment, it's short run. According to long-term, government and educational organization should allocate to foster skills in AI so that societies adapt the high-tech pace. After that, automative revolution is truly successful.

Assistant:

Great, thank you for sharing the paragraph you'd like to work on!
Just to clarify—your chosen paragraph for revision is:

> Although this process faces many challenge and debate, eventually, they will improve human development human. There are many time that human can focus on creative and innovative works. They are satisfied to work and life, and safety to work. For instance, many dangerous tasks will be finished by machinery instead of human. All in all, automation will change positively human's life.
> Although transition is difficult and face problem like so that many manual workers will unemployment, it's short run. According to long-term, government and educational organization should allocate to foster skills in AI so that societies adapt the high-tech pace. After that, automative revolution is truly successful.

Let's continue our revision process focused on **grammar/language clarity** and **argument strength**.

Step 2 – Topic Sentence Revision

The topic sentence introduces the main idea of the paragraph and links it to your thesis.

Original Topic Sentence:

> Although this process faces many challenge and debate, eventually, they will improve human development human.

Feedback:
- Grammar is unclear.
- The meaning is confusing—who/what is "they"?
- It does not explicitly say what the process is or how it benefits people.

Revision Guidance:
Consider these questions:
- What is the main idea here? Is it about how automation helps human development or quality of life?
- How does automation benefit people—creativity, safety, satisfaction?

Possible Structure:
- "Despite some challenges, automation ultimately benefits humanity by improving safety and allowing people to focus on creative tasks."

Would you like to try rewriting the topic sentence using this guidance?
Aim for one clear sentence showing how automation impacts people's lives in the long run.

Step 3 – Revising the Rest of the Paragraph

Here's your paragraph with each sentence considered for clarity and focus.
Let's revise each sentence one by one, keeping your targets in mind!

Sentence-by-Sentence Guidance

Original:

There are many time that human can focus on creative and innovative works.

Hint: Try: "Automation allows people to spend more time on creative and innovative work."

Original:

They are satisfied to work and life, and safety to work.

Hint: Consider: "This leads to greater satisfaction in both work and life, and improves workplace safety."

Original:

For instance, many dangerous tasks will be finished by machinery instead of human.

Hint: Try: "For instance, automation can take over dangerous tasks, reducing risks for human workers."

Original:

All in all, automation will change positively human's life.

Hint: Try: "Overall, automation will make positive changes to people's lives."

Original:

Although transition is difficult and face problem like so that many manual workers will unemployment, it's short run.

Hint: Try: "Although the transition may be difficult and some manual workers may lose their jobs in the short term,"

Original:

According to long-term, government and educational organization should allocate to foster skills in AI so that societies adapt the high-tech pace.

> **Hint:** Try: "in the long term, governments and educational institutions should help people develop new skills for the evolving workplace."

> > **Original:**

> > > After that, automative revolution is truly successful.

> **Hint:** Try: "As a result, society can successfully adapt to the automation revolution."

Your Turn!

Choose one or two sentences from your paragraph and try revising them using the hints above, focusing on clear grammar and logical flow.
Would you like to attempt rewriting the topic sentence and one supporting sentence now?

If you'd like, you can type your revised paragraph here, or just one sentence at a time—and I'll help you polish it!

When you're ready, here's a possible revised version for inspiration:
(based on your ideas—feel free to use or adapt!)

> Despite some challenges in the transition, automation ultimately benefits society by improving workplace safety and allowing people to pursue more creative and fulfilling work. For example, machines can handle dangerous tasks, making jobs safer and more satisfying. Although some manual workers may lose employment at first, governments and schools can help by providing training in new skills, so people can adapt to the changing workplace. With these efforts, automation will have a positive impact on human life in the long term.

(But remember, only use my sentences for ideas! The best way to learn is to write your own version first.)

Let me know which sentence you'd like to revise first, or try the entire paragraph. I'm here to coach you step by step!

After your revision, I'll check the grammar, clarity, and logic, give you feedback, and update your full revised draft. ∎

You:

In the conclusion, automation effect on employment is positive in long-term than in short-term. Technological development prospects is full potential and hopeful in employment.
As the development of automation, employment prospects is full potential and absolute.

Assistant:

Great! Let's work together step by step to revise your chosen paragraph and your concluding sentences, focusing on **grammar/language clarity** and **argument strength**, just as you requested.

Step 2 – Revised Topic Sentence

Your original topic sentence:

Although this process faces many challenge and debate, eventually, they will improve human development human.

Possible clear revision:
Despite challenges during the transition, automation will ultimately benefit people by improving safety and giving them more opportunities for creative work.

Would you like to use this version, or do you want to try writing your own?

Step 3 – Revising Supporting Sentences in Your Chosen Paragraph

Let's address each supporting idea, one at a time. Here are your original ideas and suggested clearer versions, focusing on correct grammar and strong logic.

1. Original:

There are many time that human can focus on creative and innovative works.

Clearer revision:
Automation allows people to spend more time on creative and innovative tasks.

2. Original:

They are satisfied to work and life, and safety to work.

Clearer revision:
This leads to greater satisfaction in both work and life, and makes the workplace safer.

3. Original:

For instance, many dangerous tasks will be finished by machinery instead of human.

Clearer revision:
For example, automation can take over dangerous jobs, which reduces risks for human workers.

4. Original:

All in all, automation will change positively human's life.

Clearer revision:
Overall, automation will improve people's lives.

---

5. Original:

> Although transition is difficult and face problem like so that many manual workers will unemployment, it's short run.

Clearer revision:
Although the transition may be difficult and some manual workers may lose their jobs in the short term,

---

6. Original:

> According to long-term, government and educational organization should allocate to foster skills in AI so that societies adapt the high-tech pace.

Clearer revision:
in the long term, governments and educational organizations should provide training in new skills so that workers can adapt to a high-tech economy.

---

7. Original:

> After that, automative revolution is truly successful.

Clearer revision:
With these efforts, societies can successfully adapt to the automation revolution.

Your Turn!

Would you like to try rewriting several of these sentences together now? If so, you could put them into one coherent paragraph, using the clearer versions above as hints. Give it a try!
If you feel unsure, you can write just one or two sentences and I'll help you improve them before you build your full paragraph.

Revised Conclusion Sentences (from your latest post)

Your original:

> In the conclusion, automation effect on employment is positive in long-term than in short-term. Technological development prospects is full potential and hopeful in employment.
> As the development of automation, employment prospects is full potential and absolute.

Clearer version with strong grammar and argument:

In conclusion, the effects of automation on employment are more positive in the long term than in the short term. As technology continues to develop, the future of employment is full of potential and opportunity.

Next Steps

- **Please write your revised body paragraph and let me check for clarity and grammar.**

- Or, if you prefer, revise just the topic sentence or a few supporting sentences and share them with me for feedback.

Once you post your revision, I'll provide your complete, updated draft with all improvements included!

Would you like to try rewriting the paragraph now? Or do you want more feedback before you start? Let me know how you want to proceed—I'm here to help you step by step! ■
